## PROFESSIONAL SUMMARY

Digital operations professional focused on Marketing Operations, data quality, and automation. I design workflows that turn fragmented data and processes into reliable systems, combining experience in communication, operations, and CMS with AI-assisted development. Technical portfolio includes media/CRM data reconciliation, data pipelines, validation, dashboards, and internal tools.

## CORE SKILLS

**Data & Automation:** Python, SQL/SQLite, JavaScript/Node.js, APIs, data pipelines, schema validation, deduplication, reconciliation, data quality

**Marketing Ops & Systems:** workflow automation, dashboards, CRM data reconciliation, CMS/WordPress, content architecture, cross-functional communication

**Development & Delivery:** AI-assisted development, rapid prototyping, test design, technical documentation, agent orchestration

## TECHNICAL PROJECTS

**Pipeline Pulse - Marketing Data Reconciliation & Performance Intelligence** | Independent project | 2026

- Designed and validated a MarkOps tool that imports messy Google/Meta Ads and Salesforce/HubSpot exports, normalizes and reconciles campaigns, and publishes validated KPIs in a dashboard.
- Defined pipeline architecture and business rules across schema validation, deduplication, reconciliation, data quality, deterministic spend, pipeline revenue, CAC and ROAS calculations, and manual-review states for ambiguous data.
- Defined acceptance criteria and adversarial test cases in an AI-assisted implementation workflow; deterministic calculations remain separate from the optional LLM explanation layer.

[Case Study](#) | [GitHub](#)

**Silt Strider Tools - Data Architecture & Automation** | Independent project | 2026

- Defined product requirements, data/application boundaries, validation criteria, and release decisions for a web application backed by an independent data pipeline that transforms legacy files into normalized, versioned catalogs.
- Directed an AI-assisted multi-agent workflow around explicit producer/consumer contracts, snapshot/version/hash validation, and regression testing across the pipeline and application boundary.

## PROFESSIONAL EXPERIENCE

**Digital Operations & CMS Developer (Freelance)** | Rio de Janeiro | 2022 - Present

- Built and maintained websites and CMS infrastructure for commercial clients, reorganizing content architecture, publishing workflows, and digital-asset maintenance.
- Worked directly with clients, translating business needs into actionable digital deliverables and workflows.

**Operations & Production Assistant** | Urbano Filmes / Independent Production | 2019 - 2020

- Coordinated logistics, schedules, documentation, and file organization/versioning across production projects.
- Supported communication between international creative and technical teams, helping maintain alignment across languages and working styles.

## EDUCATION

**Postgraduate Certificate - Animation, Digital Games & Entertainment Culture** | FAAP | 2022 - 2024 | Final grade: 10.0/10.0

**B.A. in Social Communication - Cinema** | PUC-Rio | 2016 - 2022
